

**Dr Demetres D. Leonidas** is a graduate of the Department of Chemistry, University of Thessaloniki and holds a PhD from the Department of Biology University of Athens. He has worked as a researcher at the Department of Biology and Biochemistry, University of Bath, U.K., Harvard Medical School, Department of Biochemistry, University of Oxford, U.K. and The National Hellenic Research Foundation. He is currently Professor of Biochemistry at the Department of Biochemistry, University of Thessaly and Biotechnology and the Director of the Structural and Functional Biochemistry Laboratory. His current research lies within structural biology in which protein structures and protein interactions within complexes in solution are used as the starting point for further studies on the mechanisms of catalysis, mechanisms of inhibition, regulation, molecular recognition, and structure-based drug design. Overall Prof. Leonidas has co-authored 96 articles in peer-referred journals, 225 entries in the Protein Data Bank that have attracted overall 2521 citations (excluding auto-citations) and an *h* index of 29.
